

NatureMapping 2008

6" by 6" section

Divide the section into 4 quads. There are ~30 in lower left quad x 4 = 120 ants in this section  
Measure this section in inches. For example 6 inches and the mound is 3' high (on both sides), 3' wide (on both sides) and 3' across the top. There are 4 – 6" grids in each square 1'. 3' = 12 grids high (times 2) x 12 grids wide (times 2) and 12 grids across = 60 grids x 120 ants/grid = an estimate of 7,200 ants outside of the ant mound.
